

DEVELOP THE PYTHON SCRIPT

PYTHON CODE:

```
# importing geopy library
from geopy.geocoders import Nominatim
# calling the Nominatim tool
loc = Nominatim(user_agent="GetLoc")
# entering the location name
getLoc = loc.geocode("grace chennai")
# printing address
print(getLoc.address)
data={'latitude':latitude,'longitude':longitude}
# printing latitude and longitude
print("Latitude = ", getLoc.latitude, "\n")
print("Longitude = ", getLoc.longitude)
```
